

# Ecommerce Accounting

“Accounting counts for more than just beans.”

Our fully-integrated [Ecommerce Accounting System](#) is feature rich and e-tail centric. Whether, you run multiple sites, maintain books for multiple companies and or deal in multiple currencies, the system has been designed to offer all of the functionality that you would need in an accounting solution and it requires no bridging as it uses the same single source database as the balance of the system, thus ensuring accuracy, streamlined processes and maximum control can define, plan and align your performance goals and objectives.

## Invoice Matching

Managing payments can be a daunting and time consuming task which is why our **Accounting module** includes automated invoice matching. Furthermore the system not only allows for full automation, but when there is a discrepancy you can instantly drill down to the line level detail of any purchase order and make adjustments based on the most accurate of information.

### The core functions of the Ecommerce Accounting System are:

- ✓ Completely Integrated
- ✓ Tri-Dimensional GL
- ✓ Invoice Matching
- ✓ Automated Bank Reconciliation
- ✓ Formula Based Expense Allocation
